### Branch protection rule

**Branch name pattern \***

**Applies to 1 branch**

**Protect matching branches**

**Require a pull request before merging**  
When enabled, all commits must be made to a non-protected branch and submitted via a pull request before they can be merged into a branch that matches this rule.

**Require approvals**  
When enabled, pull requests targeting a matching branch require a number of approvals and no changes requested before they can be merged.  
Required number of approvals before merging: 1

**Dismiss stale pull request approvals when new commits are pushed**  
New reviewable commits pushed to a matching branch will dismiss pull request review approvals.

**Require review from Code Owners**  
Require an approved review in pull requests including files with a designated code owner.

**Require approval of the most recent reviewable push**  
Whether the most recent reviewable push must be approved by someone other than the person who pushed it.

**Require status checks to pass before merging**  
Choose which [status checks](#) must pass before branches can be merged into a branch that matches this rule. When enabled, commits must first be pushed to another branch, then merged or pushed directly to a branch that matches this rule after status checks have passed.

**Require branches to be up to date before merging**  
This ensures pull requests targeting a matching branch have been tested with the latest code. This setting will not take effect unless at least one status check is enabled (see below).

Q Search for status checks in the last week for this repository

**No required checks**

No checks have been added

**Require conversation resolution before merging**  
When enabled, all conversations on code must be resolved before a pull request can be merged into a branch that matches this rule. [Learn more about requiring conversation completion before merging.](#)

**Require signed commits**  
Commits pushed to matching branches must have verified signatures.

**Require linear history**  
Prevent merge commits from being pushed to matching branches.

**Require deployments to succeed before merging**  
Choose which environments must be successfully deployed to before branches can be merged into a branch that matches this rule.

**Lock branch**  
Branch is read-only. Users cannot push to the branch.

**Do not allow bypassing the above settings**  
The above settings will apply to administrators and custom roles with the "bypass branch protections" permission.

**Rules applied to everyone including administrators**

**Allow force pushes**  
Permit force pushes for all users with push access.

**Everyone**  
Permit force pushes for all users with push access.

**Specify who can force push**  
Only these people, teams, or apps are allowed to force push.

**Allow deletions**  
Allow users with push access to delete matching branches.

## Настройки правил

The screenshot shows a GitHub pull request merge interface. At the top, it says "Improve .gitignore for IDE and environment files #1" with a "Merged" status. Below that, there's a "Conversation" tab with 0 messages, a "Commits" tab with 1 commit, a "Checks" tab with 0 checks, and a "Files changed" tab with 0 files. The main area shows a comment from "LeVVeri" about adding security rules to the .gitignore file. Below the comment is a "Merge pull request #1 from User-454789/main" button, which has been merged by "User-454789" into "User-454789:main" 7 minutes ago. A "Revert" button is also present. To the right, there are sections for "Reviewers" (none), "Assignees" (none), "Labels" (None yet), "Projects" (None yet), "Milestone" (No milestone), and "Development" (none). Notifications are set to "Unsubscribe". At the bottom, it says "Pull request successfully merged and closed" and "You're all set — the branch has been merged." There's a "Comment" button at the bottom right.

## Pull request

The screenshot shows the "Create a new repository" form on GitHub. It starts with a "General" section where the owner is "LeVVeri" and the repository name is "cuddly-octo-disco". A note says "Great repository names are short and memorable. How about **cuddly-octo-disco?**". Below that is a "Description" field with "0 / 350 characters". The next section is "Configuration", which includes "Choose visibility" set to "Public", "Start with a template" set to "LeVVeri/KYDA-2", and "Include all branches" turned off. At the bottom right is a green "Create repository" button.
